

# EWP+

## IIAs Exchange Use Cases and Scenarios

IT Center of the Aristotle University of Thessaloniki

[ewp-plus@it.auth.gr](mailto:ewp-plus@it.auth.gr)

		<p>If IIA Response is valid</p> <p>Then B checks whether it matches with a local IIA</p> <p>If IIA does not match with a local IIA</p> <p>Then B creates a new local IIA with id b.iia_id</p> <p>And B saves Dashboard's iia_id (a.iia_id) and Dashboard's hash (a.hash_1)</p>										
<p><b>At Dashboard's IIAs database</b></p> <table><tr><td>a.iia_id</td><td>...</td><td>a.hash_1</td><td></td><td></td></tr></table>	a.iia_id	...	a.hash_1				<p><b>At B's IIAs database</b></p> <table><tr><td>b.iia_id</td><td>...</td><td>b.hash_1</td><td>a.iia_id</td><td>a.hash_1</td></tr></table>	b.iia_id	...	b.hash_1	a.iia_id	a.hash_1
a.iia_id	...	a.hash_1										
b.iia_id	...	b.hash_1	a.iia_id	a.hash_1								

- 4 -

**At Dashboard's IIAs database**

a.iia_id	...	a.hash_1	b.iia_id	b.hash_1
----------	-----	----------	----------	----------

**At B's IIAs database**

b.iia_id	...	b.hash_1	a.iia_id	a.hash_1
----------	-----	----------	----------	----------

**Notice that:**

- 1) B created an IIA CNR after receiving a new IIA from A although B did not make any changes, in order to tell A about its b.iia\_id and b.hash\_1.

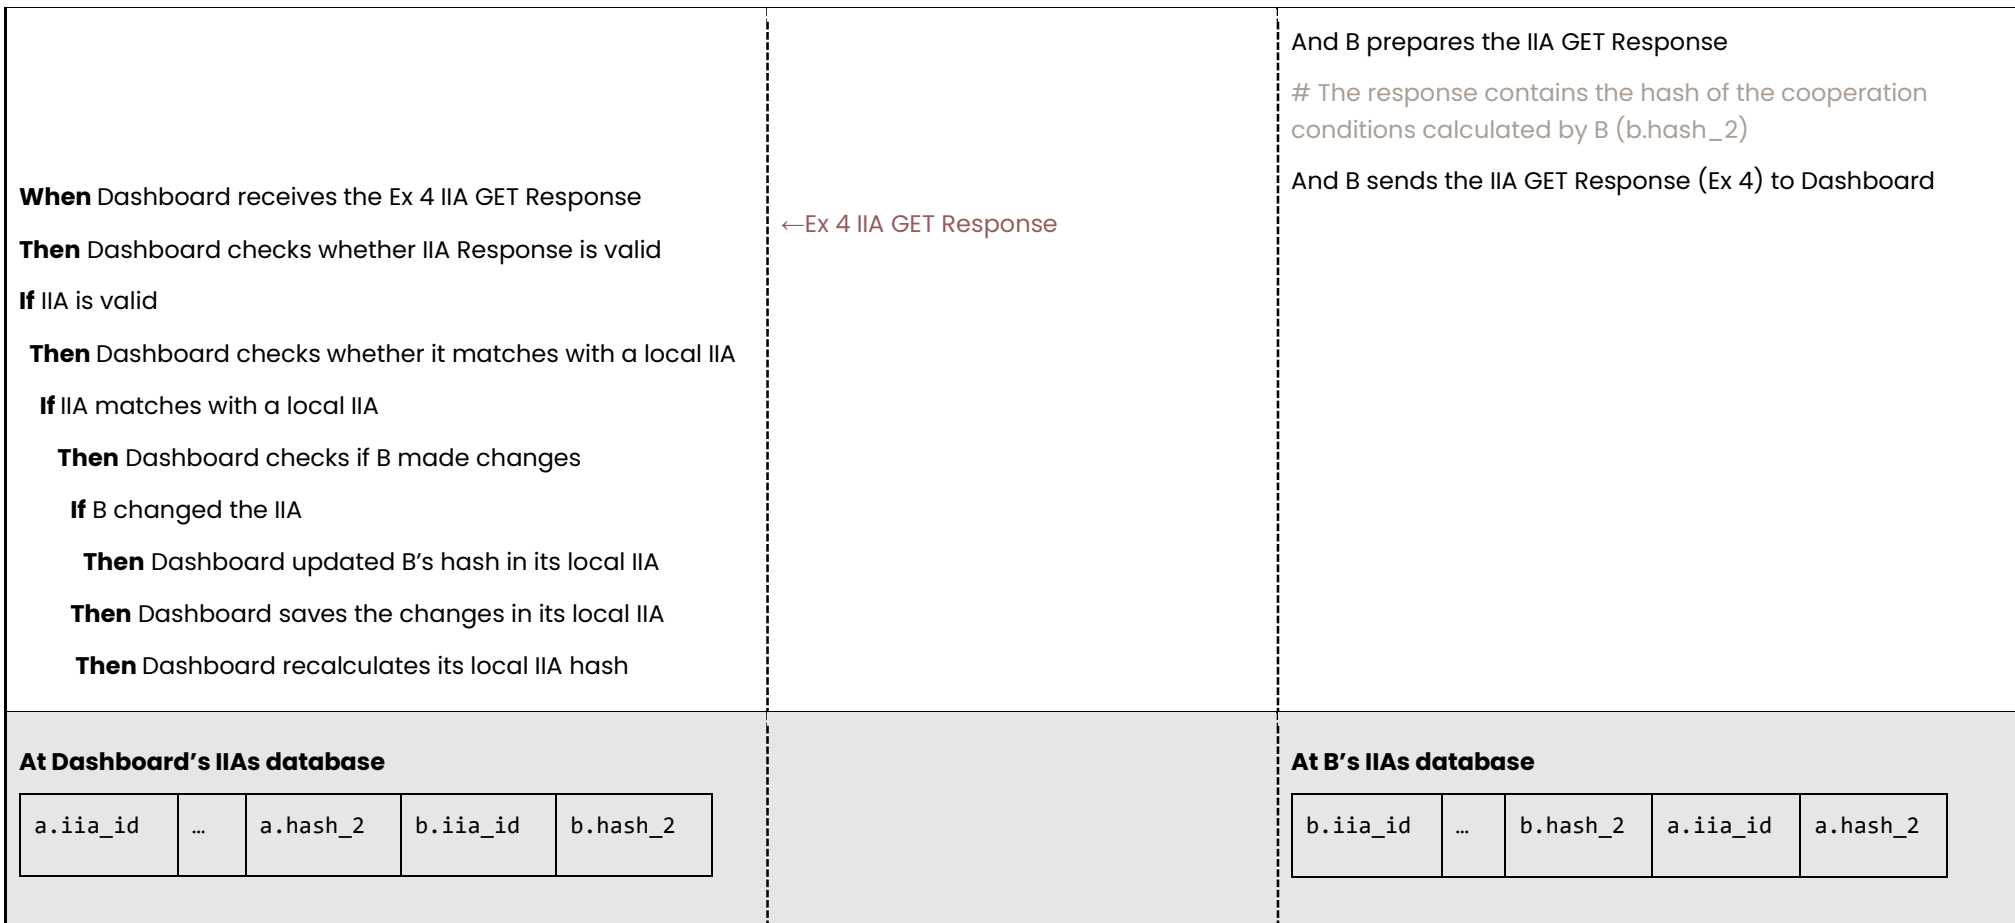

## SECTION 2 – EDITING AN IIA

HEI A: EWP Dashboard		HEI B
<p><b>Given</b> that Dashboard and B have a bound IIA</p> <p><b>When</b> Dashboard makes changes to the IIA</p> <p><b>Then</b> Dashboard sends an IIA CNR to B</p> <p><b>And</b> Dashboard waits for an IIA CNR Response</p> <p><b>When</b> Dashboard receives an IIA CNR Response from B</p> <p><b>Then</b> Dashboard is sure that B received the IIA CNR</p> <p><b>When</b> Dashboard receives an IIA GET Request from B</p> <p><b>Then</b> Dashboard searches for the IIA with id a.ia_id</p> <p><b>And</b> Dashboard prepares the IIA GET Response</p> <p># The response contains the hash of the cooperation conditions recalculated by Dashboard (a.hash_2)</p> <p><b>And</b> Dashboard sends the IIA GET Response (Ex 3) to B</p>	<p>IIA CNR: notifier_hei=a,ia_id=a.ia_id →</p> <p>← IIA CNR Empty Response</p> <p>← IIA GET Request: hei_id=a,ia_id=a.ia_id</p> <p>Ex 3 IIA GET Response →</p>	<p>When B receives an IIA CNR from Dashboard</p> <p>Then B sends an IIA CNR Empty Response to Dashboard</p> <p>And B sends an IIA GET Request to Dashboard</p> <p>And B waits for a response to the IIA GET Request</p>

		<p>When B receives the Ex 3 IIA GET Response</p> <p>Then B checks whether IIA Response is valid</p> <p>If IIA Response is valid</p> <p>Then B checks whether it matches with a local IIA</p> <p>If IIA matches with a local IIA</p> <p>Then B checks if Dashboard made changes to the IIA</p> <p>If Dashboard changed the IIA</p> <p>Then B updates Dashboard's hash in its local IIA</p> <p>Then B updates its local IIA</p> <p>Then B recalculates its local IIA hash</p>										
<p>At Dashboard's IIAs database</p> <table><tr><td>a.iia_id</td><td>...</td><td>a.hash_2</td><td>b.iia_id</td><td>b.hash_1</td></tr></table>	a.iia_id	...	a.hash_2	b.iia_id	b.hash_1		<p>At B's IIAs database</p> <table><tr><td>b.iia_id</td><td>...</td><td>b.hash_2</td><td>a.iia_id</td><td>a.hash_2</td></tr></table>	b.iia_id	...	b.hash_2	a.iia_id	a.hash_2
a.iia_id	...	a.hash_2	b.iia_id	b.hash_1								
b.iia_id	...	b.hash_2	a.iia_id	a.hash_2								
<p><b>When</b> Dashboard receives an IIA CNR from B</p> <p><b>Then</b> Dashboard sends an IIA CNR Empty Response to B</p> <p><b>And</b> Dashboard sends an IIA GET Request to B</p> <p><b>And</b> Dashboard waits for a response to the IIA GET request</p>	<p>←notifier_hei=b,iia_id=b.iia_id: IIA CNR</p> <p>IIA CNR Empty Response →</p> <p>IIA GET Request: hei_id=b,iia_id=b.iia_id</p> <p>→</p>	<p>Given that B's local IIA hash changed</p> <p>Then B sends an IIA CNR to Dashboard</p> <p>And B waits for an IIA CNR Response</p> <p>When B receives an IIA CNR Response from Dashboard</p> <p>Then B is sure that Dashboard received the IIA CNR</p> <p>When B receives an IIA GET Request from Dashboard</p> <p>Then B searches for the IIA with id b.iia_id</p>										

**Notice that:**

- 2) B created an IIA CNR after receiving changes from Dashboard although B did not make any changes, in order to tell Dashboard about its b.hash\_2.

## SECTION 3 – APPROVING AN IIA

HEI A: EWP Dashboard		HEI B
<p><b>Given</b> that Dashboard and B have exchanged their IIA Ids</p> <p><b>And</b> Dashboard has the latest version of B's hash</p> <p><b>When</b> Dashboard wants to approve an IIA</p> <p><b>Then</b> Dashboard sends an IIA Approval CNR to B</p> <p><b>And</b> Dashboard waits for an IIA Approval CNR Response</p> <p><b>When</b> Dashboard receives an IIA Approval CNR Response from B</p> <p><b>Then</b> Dashboard is sure that B received the IIA Approval CNR</p> <p><b>When</b> Dashboard receives an IIA Approval Request from B</p> <p><b>Then</b> Dashboard searches for the IIA with B's id</p> <p><b>If</b> IIA is approved in Dashboard</p> <p><b>Then</b> Dashboard prepares the IIA Approval Response</p>	<p>IIA Approval CNR: approving_hei=a,owner_hei=b,iaa_id=b.iaa_id →</p> <p>← IIA Approval CNR Empty Response</p> <p>← IIA Approval Request: approving_hei=a,owner_hei=b,iaa_id=b.iaa_id</p>	<p>When B receives an IIA Approval CNR from Dashboard</p> <p>Then B sends an IIA Approval CNR Empty Response to Dashboard</p> <p>And B sends an IIA Approval Request to Dashboard</p> <p>And B waits for a response to the IIA Approval Request</p> <p>When B receives the Ex 5 IIA Approval Response</p>

# The response contains the latest B's hash that Dashboard knows (b.hash\_2)

**And** Dashboard sends the IIA Approval Response (Ex 5) to B

Ex 5 IIA Approval Response →

Then B checks whether it matches with a local IIA

If IIA matches with a local IIA

Then B checks the hash contained in the Approval Response

If hash is equal to B's hash for the specified iia id

Then B saves Dashboard's approval

#### At Dashboard's IIAs database

a.iia_id	...	a.hash_2	b.iia_id	b.hash_2
----------	-----	----------	----------	----------

#### At Dashboard's Approvals database

a.iia_id	A	b.hash_2	...
----------	---	----------	-----

#### At B's IIAs database

b.iia_id	...	b.hash_2	a.iia_id	a.hash_2
----------	-----	----------	----------	----------

#### At B's Approvals database

b.iia_id	A	b.hash_2	...
----------	---	----------	-----

<p><b>When</b> Dashboard receives an IIA Approval CNR from B</p> <p><b>Then</b> Dashboard sends an IIA Approval CNR Empty Response to B</p> <p><b>And</b> Dashboard sends an IIA Approval Request to B</p> <p><b>And</b> Dashboard waits for a response to the IIA Approval Request</p> <p><b>When</b> Dashboard receives the Ex 6 IIA Approval Response</p> <p><b>Then</b> Dashboard checks whether it matches with a local IIA</p> <p><b>If</b> IIA matches with a local IIA</p> <p><b>Then</b> Dashboard checks the hash contained in the Approval Response</p> <p><b>If</b> hash is equal to Dashboard's hash for the specified iia id</p> <p><b>Then</b> Dashboard saves B's approval</p>	<p>← IIA Approval CNR: approving_hei=b,owner_hei=a,iia_id=a.iia_id</p> <p>IIA Approval CNR Empty Response →</p> <p>IIA Approval Request: approving_hei=b,owner_hei=a,iia_id=a.iia_id →</p> <p>←Ex 6 IIA Approval Response</p>	<p>Given that Dashboard and B have exchanged their IIA Ids</p> <p>And B has the latest version of Dashboard's hash</p> <p>When B wants to approve an IIA</p> <p>Then B sends an IIA Approval CNR to Dashboard</p> <p>And B waits for an IIA Approval CNR Response</p> <p>When B receives an IIA Approval CNR Response from Dashboard</p> <p>Then B is sure that Dashboard received the IIA Approval CNR</p> <p>When B receives an IIA Approval Request from Dashboard</p> <p>Then B searches for the IIA with partner's id a.iia_id</p> <p>If IIA is approved in B</p> <p>Then B prepares the IIA Approval Response</p> <p># The response contains the latest Dashboard's hash that B knows (a.hash_2)</p> <p>And B sends the IIA Approval Response (Ex 6) to Dashboard</p>
---	---	---

At A's IIAs database

a.iia_id	...	a.hash_1	b.iia_id	b.hash_1
----------	-----	----------	----------	----------

At Dashboard's Approvals database

a.iia_id	A	b.hash_2	...
a.iia_id	B	a.hash_2	...

At B's IIAs database

b.iia_id	...	b.hash_1	a.iia_id	a.hash_1
----------	-----	----------	----------	----------

At B's Approvals database

b.iia_id	A	b.hash_2	...
b.iia_id	B	a.hash_2	...

**Notice that:**

- 3) An IIA is approved by both parties only when both partners have shared their approvals complying to the procedure above.
- 4) Each partner sends the hash of the other partner, as partners may not calculate the same hash for the same iia conditions. As such, each partner should have previously shared the latest hash that was calculated in its system.
- 5) It is not a good practice for partners to scan the network for approvals.

## SECTION 4 – IIA CNR AFTER APPROVAL (CHANGES IN COOPERATION CONDITIONS)

HEI A: EWP Dashboard		HEI B																		
<div>At Dashboard's IIAs database</div> <table><tr><td>a.iia_id</td><td>...</td><td>a.hash_2</td><td>b.iia_id</td><td>b.hash_2</td></tr></table> <div>At Dashboard's Approvals database</div> <table><tr><td>a.iia_id</td><td>A</td><td>b.hash_2</td><td>...</td></tr></table>	a.iia_id	...	a.hash_2	b.iia_id	b.hash_2	a.iia_id	A	b.hash_2	...		<div>At B's IIAs database</div> <table><tr><td>b.iia_id</td><td>...</td><td>b.hash_2</td><td>a.iia_id</td><td>a.hash_2</td></tr></table> <div>At B's Approvals database</div> <table><tr><td>b.iia_id</td><td>A</td><td>b.hash_2</td><td>...</td></tr></table>	b.iia_id	...	b.hash_2	a.iia_id	a.hash_2	b.iia_id	A	b.hash_2	...

b.iia_id	A	b.hash_2	...																	
<p>Given that Dashboard's local IIA hash changed</p> <p>Then Dashboard sends an IIA CNR to B</p> <p>And Dashboard waits for an IIA CNR Response</p> <p>When Dashboard receives an IIA CNR Response from B</p> <p>Then Dashboard is sure that B received the IIA CNR</p> <p>When Dashboard receives an IIA GET Request from B</p> <p>Then Dashboard searches for the IIA with id a.iia_id</p> <p>And Dashboard prepares the IIA GET Response</p> <p># The response contains the hash of the cooperation conditions calculated by A (a.hash_3)</p> <p>And Dashboard sends the IIA GET Response (Ex 8) to B</p>	<p>IIA CNR: notifier_hei=a,iia_id=a.iia_id →</p> <p>←IIA CNR Empty Response</p> <p>←IIA GET Request: hei_id=a,iia_id=a.iia_id</p> <p>Ex 8 IIA GET Response →</p>	<p>When B receives an IIA CNR from Dashboard</p> <p>Then B sends an IIA CNR Empty Response to Dashboard</p> <p>And B sends an IIA GET Request to Dashboard</p> <p>And B waits for a response to the IIA GET Request</p> <p>When B receives the Ex 8 IIA GET Response</p> <p>Then B checks whether IIA Response is valid</p> <p>If IIA is valid</p> <p>Then B checks whether it matches with a local IIA</p>																		

		<p>If IIA matches with a local IIA</p> <p>Then B checks if Dashboard made changes</p> <p>If Dashboard changed the IIA</p> <p>Then B updated Dashboard's hash in its local IIA</p> <p>Then B saves the changes in its local IIA</p> <p>Then B recalculates its local IIA hash</p>																		
<p><b>At A's IIAs database</b></p> <table><tr><td>a.iia_id</td><td>...</td><td>a.hash_3</td><td>b.iia_id</td><td>b.hash_3</td></tr></table> <p><b>At Dashboard's Approvals database</b></p> <table><tr><td>a.iia_id</td><td>A</td><td>b.hash_2</td><td>...</td></tr></table>	a.iia_id	...	a.hash_3	b.iia_id	b.hash_3	a.iia_id	A	b.hash_2	...		<p><b>At B's IIAs database</b></p> <table><tr><td>b.iia_id</td><td>...</td><td>b.hash_3</td><td>a.iia_id</td><td>a.hash_3</td></tr></table> <p><b>At B's Approvals database</b></p> <table><tr><td>b.iia_id</td><td>A</td><td>b.hash_2</td><td>...</td></tr></table>	b.iia_id	...	b.hash_3	a.iia_id	a.hash_3	b.iia_id	A	b.hash_2	...
a.iia_id	...	a.hash_3	b.iia_id	b.hash_3																
a.iia_id	A	b.hash_2	...																	
b.iia_id	...	b.hash_3	a.iia_id	a.hash_3																
b.iia_id	A	b.hash_2	...																	

**Notice that:**

- 6) A partner may make changes to an IIA even after one partner approved it.
- 7) After changes in the IIA, the approval is not valid and should be exchanged again with the latest hashes.
- 8) Again, in this scenario, Dashboard made a new IIA CNR in order to tell B about its new hash.
- 9) If the hashes are the same, the changes should be simply processed with no effect in the approvals whatsoever.
